Education

Worcester Polytechnic Institute Worcester, MA
B.S. Computer Science *Aug. 2024 – Expected May 2028*

Relevant Coursework: Operating Systems, Systems Programming, Software Engineering, Web Application Security

Technical Skills

Languages: Python, Java, JavaScript/TypeScript, C/C++, Bash, SQL
Linux & Infrastructure: Linux (Debian), Bash, networking, DHCP, DNS, SSH, Docker, CI/CD
Frameworks & Tools: FastAPI, React, Node.js, Express, REST APIs, Git/GitHub, Agile/Scrum
Databases & Cloud: PostgreSQL, Supabase, MySQL, AWS (EC2), Render
AI & ML: LLM APIs, RAG pipelines, embeddings & vector search, scikit-learn

Experience

AI Integration Intern July 2026 – Aug. 2026
Gratinsta *Somerville, MA*

- Built an internal web platform hosting twelve business tools behind a single login with Google OAuth and role-based permissions (Node.js, Express, React, PostgreSQL).
- Developed a prospecting tool that turns an address or spreadsheet into nearby retail leads with sourced contacts, combining map geocoding with AI-driven web search.
- Built an institutional research tool ranking sites by product fit, with caching and background jobs to control cost.
- Integrated the Claude API across the platform, replacing hours of manual research for the sales team.

Assistant Lead Software Engineer Mar. – May 2026
CS 3733 Software Engineering, in collaboration with Hanover Insurance *Worcester, MA*

- Applied Agile methodologies on a 10-person team to build a cloud-deployed web application prototype for Hanover Insurance, delivered at the end of an eight-week term.
- Developed on the PERN stack with TypeScript, Prisma ORM, and Tailwind CSS, deployed on AWS.
- Responsible for the full-site AI content search, CMS bulk uploading, inline file viewer, role-based permissions, and notification and review components of the application.
- Helped gather software requirements and write user stories; coordinated the team by managing task tracking, reviewing pull requests, and resolving integration bugs.

Information Technology Intern June 2025 – Aug. 2025
City of Marlborough *Marlborough, MA*

- Deployed and configured staff workstations (OS setup, software, updates); diagnosed software, hardware, and network issues across city departments and set up computer labs in multiple school buildings.

Projects

Raspberry Pi Netboot Cluster | *Linux, Bash, Networking, Docker* Oct. 2025 – Present

- Built a 3-node cluster where the worker nodes have no storage of their own and load their entire operating system over the network from a head node at boot.
- Set up the head node as a router and gateway for an isolated subnet, handling address assignment, name resolution, network boot, shared storage, and firewall rules.
- Secured and manage the cluster with key-based SSH, limited sudo access, and tooling to run commands across all nodes at once.
- Traced boot failures through network logs and bootloader diagnostics to find and fix the root cause.

Skapta | *Python, FastAPI, React, Pinecone* Jun. 2026 – Present

- AI-powered scaffolder that turns a plain-English project description into a recommended tech stack and a downloadable, pre-configured codebase.
- Designed and built the retrieval-augmented generation (RAG) pipeline in Python: scraping, chunking, embeddings, vector search, and cross-encoder reranking.
