EDUCATION

Worcester Polytechnic Institute

Worcester, MA

B.S. Computer Science

Aug. 2024 – Expected May 2028

Relevant Coursework: Software Engineering, Operating Systems, Machine Learning, Algorithms, Systems

TECHNICAL SKILLS

Languages: Python, C/C++, TypeScript/JavaScript, Java, HTML/CSS

Frameworks & Libraries: React, FastAPI, Node.js, Express, Prisma ORM, Tailwind CSS, Auth0

Systems & Cloud: Linux, Docker, Kubernetes (K3s), AWS (EC2), CI/CD, Git/GitHub, REST APIs

Databases: PostgreSQL, Supabase, MySQL

AI & ML: LLM APIs, RAG pipelines, embeddings & vector search, prompt engineering

EXPERIENCE

AI Integration Intern

July 2026 – Aug. 2026

Gratinsta

Somerville, MA

- Built an internal web platform hosting twelve business tools behind a single login, with Google OAuth, role-based permissions, and per-tool user guides (Node.js, Express, React, PostgreSQL/Supabase, Render).
- Developed a prospecting tool that takes an address or an uploaded spreadsheet of accounts and returns nearby retail leads with sourced contact details, merging map-based geocoding with AI-driven web search to reach businesses missing from map data.
- Architected an AI product-photography pipeline generating and compositing product imagery using the Claude and Gemini APIs for image processing.
- Integrated Claude API across the platform's tools, replacing hours of manual research for the sales team.

Assistant Lead Software Engineer

Mar. – May 2026

CS 3733 Software Engineering, in collaboration with Hanover Insurance

Worcester, MA

- Applied Agile development methodologies on a 10-person team to create a web application prototype running in the cloud for Hanover Insurance, delivered at the end of the eight-week term.
- Developed on the PERN stack with TypeScript, Prisma ORM, and Tailwind CSS, deployed on AWS.
- Responsible for the full-site AI content search, CMS bulk uploading, inline file viewer, role-based permissions, and notification and review components of the application.
- Helped gather software requirements and write user stories; coordinated the team by managing task tracking, reviewing pull requests, and resolving integration bugs.

Information Technology Intern

June 2025 – Aug. 2025

City of Marlborough

Marlborough, MA

- Deployed and configured staff workstations and diagnosed software, hardware, and network issues across city departments.

PROJECTS

Skapta | *Python, FastAPI, React, LangChain, Pinecone, Groq*

Jun. 2026 – Present

- AI-powered scaffolder that turns a natural-language project description into a recommended tech stack and a downloadable, pre-configured full-stack codebase.
- Designed and built the retrieval-augmented generation pipeline: scraping, chunking, sentence-transformer embeddings, Pinecone vector storage, and cross-encoder reranking over search results.
- Wrote an evaluation harness scoring recommendation accuracy per stack category against a labeled 15-case eval set.

Raspberry Pi Cluster | *Linux, Docker, K3s, WireGuard*

Oct. 2025 – Present

- Built and networked a multi-node Raspberry Pi cluster running K3s, orchestrating containerized services across nodes.
- Self-hosted a web server and configured WireGuard VPN for remote access; maintain OS updates and node recovery.

Web Vulnerability Scanner | *Python, HTTP*

Mar. 2026

- CLI tool that probes sensitive endpoints (/admin, .env, backup files), audits missing HTTP security headers, and generates structured vulnerability reports.
